phospholipase A2 (EC 3.1.1.4) - mamushi
phospholipase A2 (EC 3.1.1.4) - mamushi
N.Alternate names: phosphatidylcholine 2-acylhydrolase
C;Species: Agkistrodon blomhoffi (mamushi)
C;Date: 17-Mar-1987 #sequence_revision 17-Mar-1987 #text_change 26-Feb-1999
C;Accession: A00766; 843474
R;Forst, S.; Weiss, J.; Blackburn, P.; Frangione, B.; Goni, F.; Elsbach, P.
Biochemistry 25, 4309-4314, 1986
A;Title: Amino acid sequence of a basic Agkistrodon halys blomhoffii phospholipase A2
A;Reference number: A00766; MUID:87000546; PMID:3530322
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                myotoxin precursor - southern copperhead
C; Species: Agkistrodon contortrix contortrix (southern copperhead)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                           A Molecule type: protein
A Residues: 1-19;50-56 <-DUA>
C; Complex: homodimer
C; Function:
A Description: catalyzes hydrolysis of 1,2-diacyl-sn-glycero-3-phosphocholine to 1-acyl-A; Note: the reaction is strongly enhanced when the phospholipid is condensed into a mice C; Superfamily: phospholipase A2
C; Reywords: calcium: carboxylic ester hydrolase; homodimer; lipid degradation; metallopr F; 26-115,28-44,43-95,50-88,57-81,759,31,48/Binding site: mitcellar substrate (Gln, Tyr) #status predicted F; 27,29,31,48/Binding site: calcium (Tyr, Gly, Gly, Asp) #status predicted F; 47,89/Active site: His, Asp #status predicted F; 49-122/Disulfide bonds: #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    G:Species: Bothrops jararacussu (jararacussu)

112892 seqs, 41476328 residues Searched:

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 08 Maximum Match 1008

Listing first 45 summaries

SwissProt_40:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.
--- FUNCION: PA2 catalyzes the calclum-dependent hydrolysis of the 2-acyl groups in 3-sn-phosphoglycerides. Hydrolyzes
Phosphatidylglycerol versus phosphatidylcholine with a 15-fold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     - Feterand ATTUTIVE: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid anion.
- COFACTOR: Binds 1 calcium ion per subunit.
- SUBCELULAR LOCATION: Secreted.
- TISSUE SPECIFICITY: Expressed at high levels in placenta, testis, thymus and at lower levels in heart, kidney, liver and prostate.
- SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY.
                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

-!- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
-!- TISSUE SPECIFICITY: Expressed in several tissues including pancreas, spleen, thymus, skin, lung, and ovary.
-!- SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY.

RY TCYStal structure of human secretory phospholipase A2-IIA complex with the potent indolizine inhibitor 120-1032.";

RJ J Blochem. 123:619-623(1998).

CC -I FUNCTION: THOUGHT TO PARTICIPATE IN THE REGULATION OF THE PHOSPHOLIPID METABOLISM IN BLOMEMBRANES INCLUDING EICOSANOID STORY CROUPS IN 3-SN-PHOSPHOGLYCERIDES.

CC ACYL GROUPS IN 3-SN-PHOSPHOGLYCERIDES.

CC ACYL GROUPS IN 3-SN-PHOSPHOGLYCERIDES.

CC -I CAPALYTIC ACTIVITY: PHOSPHALIGALCHOLIPINE + H(2)O = 1-

CC -I CAPALYTIC ACTIVITY: PHOSPHALIGALCHOLIPINE + A fatty acid anion.

CC -I CAPALYTIC ACTIVITY: Membrane-associated.

CC -I SUBCELLULAR LOCATION Membrane-associated.

CC -I SUBCELLULAR LOCATION Membrane-BOUND AND SECRETED FORMS

CC -I SUBCELLULAR ELOCATION THE MEMBRANE-BOUND AND SECRETED FORMS

CC -I SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. -!- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)0 = 1-
acylglycerophosphocholine + a fatty acid anion.
-!- COFACTOR: Binds 1 calcium ion per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Membrane-associated.
-!- TISSUE SPECIFICITY: ALVOBOLAR MACROPHAGES, AND AT MUCH LOWER LEVELS
-!- IN PERIPHERAL BLOOD MONOCYTES AND PERITONEAL MACROPHAGES.
-!- SIMILARITY: BELONGS TO THE PHOSPHOLIPASE AZ FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DWCCHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120

Immunoaffalty purification, partial sequence, and subcellular
I Immunoaffalty purification, partial sequence, and subcellular
I. J. Blol. Chem. 264:10008-10014 (1989).
I. FUNCTION: THOUGHT TO PARTICIPATE IN THE REGULATION OF THE
PHOSPHOLIPID METABOLISM IN BIOMEMBRANES INCLUDING ETCOSANOID
IC BIOSYNTHESIS. CAPALYZES THE CALCTUM-DEPENDENT HYDROLYSIS OF THE 2-
ACYL GROUPS IN 3-SN-PHOSPHOGLYCERIDES.
I- CATALYTIC ACTIVITY: Phosphatidylcholine + H(2)O = 1-
acylglycerophosphocholine + a fatty acid anion.
CC -I- COFACTOR: Binds 1 calclum ion per subunit (By similarity).
CC -I- MISCELLUAR LOCATION: Membrane-associated.
CC -I- MISCELLANEOUS: GROUP II PHOSPHOLIPASE A2 IS FOUND IN MANY CELLS
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Rattus.
                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.
